2. a low-stakes Exam!!

Interpersonal & Group Processes

Personality

1

Personality defined

- Personality is an easy concept to grasp for most of us. It's what makes you "you". It encompasses all the traits, characteristics, and quirks that set you apart from everyone else.
- In the words of the American Psychological Association (APA), personality is:
  - "individual differences in characteristic patterns of thinking, feeling, and behaving" (APA, 2017).

2

Background on Personality

- Explains preferences for behavior
- Develops early
- Explains everyday behavior of people
- Easy to observe

3

Big five personality traits!! => OCEAN.

(NEO-PI is the questionnaire used to measure these traits)

The Big Five (NEO-PI)

- **O**penness to Change
- **C**onscientiousness (Work Ethic)
- **E**xtraversion (Interpersonal Patterns)
- **A**greeableness
- **N**euroticism (Emotional Reactions)

4

(NEO-PI) → Neuroticism, Extraversion, Openness — Personality Inventory!

should be low in a group leader!

Neuroticism ↑ ⇒ low Emotional Stability

- The propensity to experience and be prone to negative emotions
- Tendency to experience negative feelings like anger, anxiety, worry, fear, depression and personal insecurity.
- Sometimes labelled as lack of "Emotional Stability"
- An emotional reaction and NOT a disorder

5

Strengths

6

"N" Low scores	"N" High scores
• Calm under pressure • Resilient/bounce back from failure • Can keep others calm in a crisis • Even-keeled • Sure of themselves • Adventurous	• Barometer of crisis/attuned to risk • Will not allow the team to slack down • Emotion expression can be motivating • Passionate • Responsive to feedback and coaching

6

Weaknesses

7

"N" Low scores	"N" High scores
• Unresponsive to feedback • Too self-confident • Too laid back • Calmness can lull the team into complacency	• Emotional • Sadness • Worry • Burnout due to stress • Anxiety about performance • Temperamental • Easily angered • Too responsive to feedback

7

Neuroticism linkages (in Research)

- High scores on Neuroticism has been linked to poorer job performance and motivation, including goal setting and self-efficacy related motivation (Judge & Ilies, 2002).
  - *Consider a friend or coworker who's a superstar at work but tends to worry a lot about her performance. She gets a little negative feedback from her boss, which to her feels like a huge criticism. She responds by worrying more to the point that she's so consumed with self-evaluation and anxiety that she can't focus anymore and calls in sick. In the end, she creates her own self-fulfilling prophecy.*
- Linked to higher performance in a busy work environment or if they are expending a high level of effort (Smillie et al., 2006)

8

typically high in leaders!

E

Extraversion ↑ ⇒ Extrovert.

- This factor has two familiar ends of the spectrum: extraversion and introversion.
- The predisposition to get energy from being around others, and to be dominant in groups
- Extraversion consists of sociability, dominance, ambition and excitement seeking.
- In general, extroverts draw energy or "recharge" from interacting with others, while introverts get tired from interacting with others and replenish their energy from solitude.

9

Strengths

10

"E" Low scores	"E" High scores
• Effective listener • Reflective (Think before act) • Team player-contributor • Good with solitary work	• Action oriented • Good at networking/informed • Communicative • Could be seen as a leader • More likely to be considered as transparent

10

Weaknesses

11

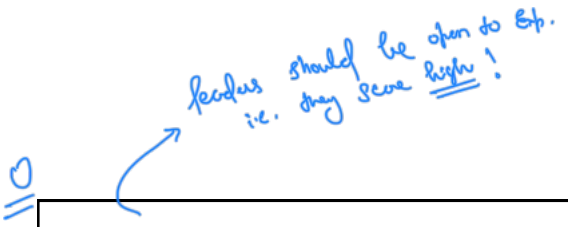

"E" Low scores	"E" High scores
• Aloof, failure to communicate • Appears unassertive • Difficulty motivating others • Difficult for others to read • Misunderstood (perceived as unfriendly and arrogant)	• Action before reflection • Thinking aloud can confuse others • May appear mentally muddled • Can steamroll introverts • Problems with working solo

11

Extraversion linkages

- Extraversion is a good predictor of -
  - Effective functioning and general well-being (Ozer & Benet-Martinez, 2006)
  - Positive emotions (Verduyn & Brans, 2012), and
  - Overconfidence in task performance (Schaefer, Williams, Goodie, & Campbell, 2004).

12

Openness to experience

- The inclination to be interested in new and/or unusual things
- It is also sometimes called intellect or imagination.
- Openness to experience concerns an individual's willingness to try to new things, to be vulnerable, and the ability to think outside the box.

13

Strengths

14

"O" Low scores	"O" High scores
• Realistic and pragmatic • Good grasp of what is happening in organization • Use factual data to forecast and make decisions • Respects time-honoured traditions	• Visionary and imaginative • Strategically focused • Drive change • Think long-term • Adaptive

14

Weaknesses

15

"O" Low scores	"O" High scores
• Too focused on the here and now • Need to collect a lot of data before acting • "Analysis-paralysis" • They can easily miss the big picture • Formality and tradition	• Fail to give proper weight to current realities • Indifferent to "Standard Operating Procedure" • Indifferent to implementation concerns

15

Openness to experience

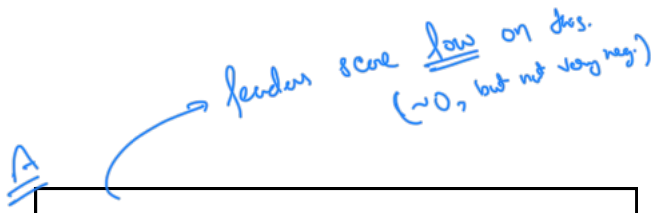

- High on openness to experience is likely someone who has a love of learning, enjoys the arts, engages in a creative career or hobby, and likes meeting new people
- Low on openness to experience probably prefers routine over variety sticks to what they know and prefers less abstract arts and entertainment.

16

Openness to Experience

- Openness to experience has been linked to
  - Leadership positions, likely due to the ability to entertain new ideas and think outside the box
  - Universalism values, which include promoting peace and tolerance and seeing all people as equally deserving of justice and equality (Douglas, Bore, & Munro, 2016).
  - Broad intellectual skills and knowledge and may tend to increase with age (Schretlen, van der Hulst, Pearlson, & Gordon, 2010).
  - Creativity, originality, and a tendency to explore their inner selves
  - Negatively related to conservative political attitudes (Soldz & Vaillant, 1999).

17

Agreeableness

- The tendency to "go along to get along" and place high value on getting along well with others
- Agreeableness concerns your orientation to others
  - Rests on how you generally interact with others.
- Agreeableness consists of cooperation, trustfulness, compliance and affability.

18

Strengths

19

"A" Low scores	"A" High scores
• Analytical and rational • Thick skinned • Tough questions, decisions	• Strong relationship builder • Care about others • Trusting and charitable • Effective coach

19

Weaknesses

20

"A" Low scores	"A" High scores
• Alienate people • Conflicts • Generate low trust • Uber-Competitive	• Transparent and predictable • Easily taken for a ride

20

Agreeableness linkages

- Agreeable individuals tend to value benevolence, tradition, and conformity while avoiding placing too much importance on power, achievement, or the pursuit of selfish pleasures.
- Agreeableness is rarely accompanied by cruelty, ruthlessness, or selfishness (Roccas, Sagiv, Schwartz, & Knafo, 2002).
- Agreeableness affects any arena in which interactions with others are important – this includes almost everything!

21

Conscientiousness

- Interest in leading a structured and organized life
- Conscientiousness can be described as the tendency to control impulses and act in socially acceptable ways
- Conscientious → facets include duty achievement and achievement striving; facilitate goal-directed behaviour
- Conscientious people excel in their ability to delay gratification, work within the rules, and plan and organize effectively.

22

Strengths

23

"C" Low scores	"C" High scores
• Responsive to change • Quick responders • Pressure-prompted (work in crisis)	• Reliable, predictable • Delegate very well • Lots of drive • Good at goal setting

23

Weaknesses

24

"C" Low scores	"C" High scores
• Easily distracted • Chaotic and unreliable • Possible untrustworthy	• Push for closure • Stick with plans • Oversimplify complex situations • Obsessive about control

24

Conscientiousness linkages

- Those high on conscientiousness are likely to value order, duty, achievement, and self-discipline, and consciously practice deliberation and work towards increased competence (Roccas, Sagiv, Schwartz, & Knafo, 2002).
- Strongly related to post-training learning (Woods, Patterson, Koczwara, & Sofat, 2016), effective job performance (Barrick & Mount, 1991), and intrinsic and extrinsic career success (Judge, Higgins, Thoresen, & Barrick, 1999).
- As long as the highly conscientious do not fall prey to exaggerated perfectionism, those high on conscientiousness are likely to achieve many of the traditional markers of success.
- The long-term study by Soldz and Vaillant (1999) found that conscientiousness was positively correlated with adjustment to life's challenges and the maturity of one's defensive responses.

25

Does it matter for long-term career Success? For entrepreneus?

26

- Entrepreneurs (more likely) score higher on Conscientiousness Openness to Experience than managers.
- Entrepreneurs score lower on Neuroticism and Agreeableness than managers.

26

What about team performance?

27

- Mean levels of team *conscientiousness* and minimum levels of *agreeableness* related with higher team performance
  - Effects stronger for professional teams compared to student teams.
- In professional teams, lower levels of neuroticism helps higher team performance.

27

SO WHAT???

28

How might this sort of personality framework be useful to us?

– It gives us insights into what might feel natural

– It increases our ability to understand and influence others and the types of interactions that might be most effective (interviews, negotiations, sales)

– With understanding, one can move from irritation to acceptance to even ability to complement each other

28

Does it change or remain static?

29

- Mostly heritable (45-60%) for each component
- Recent research suggests it can change depending on
  - Life events
  - Organizational factors

29

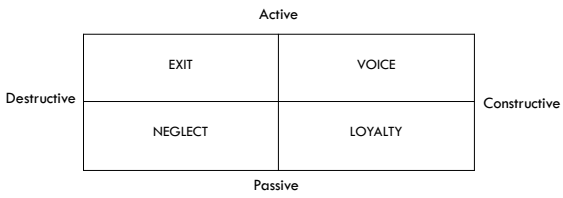

Managing interpersonal relationships

1

Dissatisfied employee? What are your options?

2

Exit-Voice-Loyalty-Neglect (EVLN) model

Rusbult, C. E., Farrell, D., Rogers, G., & Mainous III, A. G. (1988). Impact of Exchange Variables on Exit, Voice, Loyalty, and Neglect: An Integrative Model of Responses to Declining Job Satisfaction. *Academy of Management Journal*, 599-627.

2

EVLN

3

- Exit: Formally separating, Moving out
- Voice: Discussing problems, Seeking help, feedback
- Loyalty: Patiently waiting and hoping things will improve
- Neglect: Ignoring the relationship, Spending less time together, reduced effort

3

Managerial skills

5

Do you fit in the workplace?

5

6

Do you fit in the workplace? Fit with what?

Fit is defined as the compatibility between individual and their work environment when the characteristics are well matched

- P-Job: Person characteristics and those of the job or tasks that are performed at work
- P-Organization: Individuals will be successful in organizations that share their personalities on climate/culture/goal congruence
- P-Group: Interpersonal compatibility between individuals and their work groups
- P-Supervisor: Dyadic relationship between individuals and others in their work environment

Kristof-Brown, A. L., Zimmerman, R. D., & Johnson, E. C. (2005). Consequences of individual's fit at work: A meta-analysis of person-job, person-organization, person-group, and person-supervisor fit. *Personnel Psychology*.

6

7

Consequence of P-O fit

- P-O: Person characteristics and those of the organizational culture/climate/goal
  - Job satisfaction (0.44)
  - Intent to Quit (-.35)
  - Overall performance (0.07)

Kristof-Brown, A. L., Zimmerman, R. D., & Johnson, E. C. (2005). Consequences of individual's fit at work: A meta-analysis of person-job, person-organization, person-group, and person-supervisor fit. *Personnel Psychology*.

7

8

Consequence of P-J fit

- P-J: Person characteristics and those of the job
  - Job satisfaction (0.56)
  - Intent to Quit (-.46)
  - Overall performance (0.20)

Kristof-Brown, A. L., Zimmerman, R. D., & Johnson, E. C. (2005). Consequences of individual's fit at work: A meta-analysis of person-job, person-organization, person-group, and person-supervisor fit. *Personnel Psychology*.

8

Consequence of P-G fit

9

- P-G: Person characteristics and those of the work group
  - Job satisfaction (0.31)
  - Intent to Quit (-.22)
  - Overall performance (0.19)
- In Pre-entry stage, not enough information

Kristof-Brown, A. L., Zimmerman, R. D., & Johnson, E. C. (2005). Consequences of individual's fit at work: A meta-analysis of person-job, person-organization, person-group, and person-supervisor fit. *Personnel Psychology*.

9

Consequence of P-S fit

10

- P-S: Person characteristics and those of the supervisor
  - Job satisfaction (0.44)
  - Overall performance (0.18)
- In Pre-entry stage, not enough information

Kristof-Brown, A. L., Zimmerman, R. D., & Johnson, E. C. (2005). Consequences of individual's fit at work: A meta-analysis of person-job, person-organization, person-group, and person-supervisor fit. *Personnel Psychology*.

10

11

What is interpersonal trust, and how to develop it in workplaces?

11

Interpersonal trust

12

- "The willingness of a party to be vulnerable."
- Transparent communication is a currency to build trust on a continuous basis

Abrams, L. C., Cross, R., Lesser, E., & Levin, D. Z. (2003). Nurturing interpersonal trust in knowledge-sharing networks. *Academy of Management Perspectives, 17*(4), 64-77.

12

Managerial Behaviors That Promote Interpersonal Trust

13

Trust Builder	Description and Logic	Managerial Actions
Trustworthy Behaviors		
1. Act with discretion	Keeping a secret means not exposing another person's vulnerability; thus, divulging a confidence makes a person seem malevolent and/or unprofessional. *Promotes: benevolence trust*	• Be clear about what information you are expected to keep confidential. • Don't reveal information you have said you would not . . . and hold others accountable for this.
2. Be consistent between word and deed	When people do not say one thing and do another, they are perceived as both caring about others (i.e., they do not mislead) and as being competent enough to follow through. *Promotes: benevolence and competence trust*	• Be clear about what you have committed to do, so there is no misunderstanding. • Set realistic expectations when committing to do something, and then deliver.
3. Ensure frequent and rich communication	Frequent, close interactions typically lead to positive feelings of caring about each other and better understandings of each other's expertise. *Promotes: benevolence and competence trust*	• Make interactions meaningful and memorable. • Consider having some face-to-face (or at least telephone) contact. • Develop close relationships.
4. Engage in collaborative communication	People are more willing to trust someone who shows a willingness to listen and share; i.e., to get involved and talk things through. In contrast, people are wary of someone who seems closed and will only answer clear-cut questions or discuss complete solutions. *Promotes: benevolence and competence trust*	• Avoid being overly critical or judgmental of ideas still in their infancy. • Don't always demand complete solutions from people trying to solve a problem. • Be willing to work with people to improve jointly on their partially formed ideas.
5. Ensure that decisions are fair and transparent	People take their cues from the larger environment. As a result, there is a "trickle down" effect for trust, where the way management treats people leads to a situation where employees treat one another similarly. Thus, fair and transparent decisions on personnel matters translate into a more trusting environment among everyone. *Promotes: benevolence trust*	• Make sure that people know how and why personnel rules are applied and that the rules are applied equally. • Make promotion and rewards criteria clear-cut, so people don't waste time developing a hidden agenda (or trying to decode everyone else's).

Abrams, L. C., Cross, R., Lesser, E., & Levin, D. Z. (2003). Nurturing interpersonal trust in knowledge-sharing networks. *Academy of Management Perspectives*, *17*(4), 64-77.

13

Managerial Behaviors That Promote Interpersonal Trust

14

Trust Builder	Description and Logic	Managerial Actions
Organizational Factors		
6. Establish and ensure shared vision and language	People who have similar goals and who think alike find it easier to form a closer bond and to understand one another's communications and expertise. *Promotes: benevolence and competence trust*	• Set common goals early on. • Look for opportunities to create common terminology and ways of thinking. • Be on the lookout for misunderstandings due to differences in jargon or thought processes.
7. Hold people accountable for trust	To make trustworthy behavior become "how we do things here," managers need to measure and reward it. Even if the measures are subjective, evaluating people's trustworthiness sends a strong signal to everyone that trust is critical. *Promotes: benevolence and competence trust*	• Explicitly include measures of trustworthiness in performance evaluations. • Resist the urge to reward high performers who are not trustworthy. • Keep publicizing key values such as trust—highlighting both rewarded good examples and punished violations—in multiple forums.
Relational Factors		
8. Create personal connections	When two people share information about their personal lives, especially about similarities, then a stronger bond and greater trust develop. Nonwork connections make a person seem more "real" and human, and thus more trustworthy. *Promotes: benevolence trust*	• Create a "human connection" with someone based on nonwork things you have in common. • Maintain a quality connection when you do occasionally run into acquaintances, including discussing nonwork topics. • Don't divulge personal information shared in confidence.
9. Give away something of value	Giving trust and good faith to someone makes that person want to be trusting, loyal, and generous in return. *Promotes: benevolence trust*	• When appropriate, take risks in sharing your expertise with people. • Be willing to offer others your personal network of contacts when appropriate.
Individual Factors		
10. Disclose your expertise and limitations	Being candid about your limitations gives people confidence that they can trust what you say are your strengths. If you claim to know everything, then no one is sure when to believe you. *Promotes: competence trust*	• Make clear *both* what you do and don't know. • Admit it when you don't know something rather than posture to avoid embarrassment. • Defer to people who know more than you do about a topic.

15

1

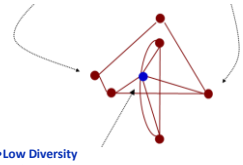

NETWORKING: KNOWING AND BUILDING RELATIONSHIPS WITH OTHERS

1

Differences in Networks

- High Diversity
- Low redundancy
- Brokerage

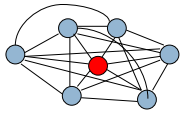

- Low Diversity
- High redundancy
- No Brokerage

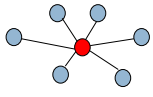

2

What kind of network do you want to choose? When?

Network A

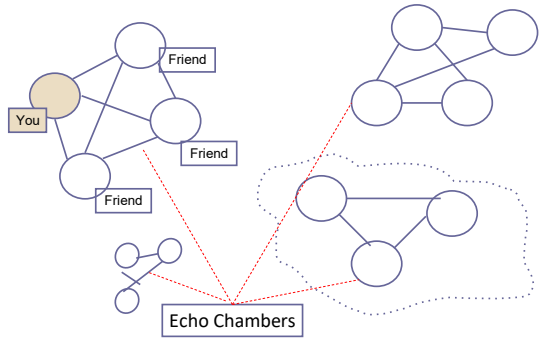

Network B

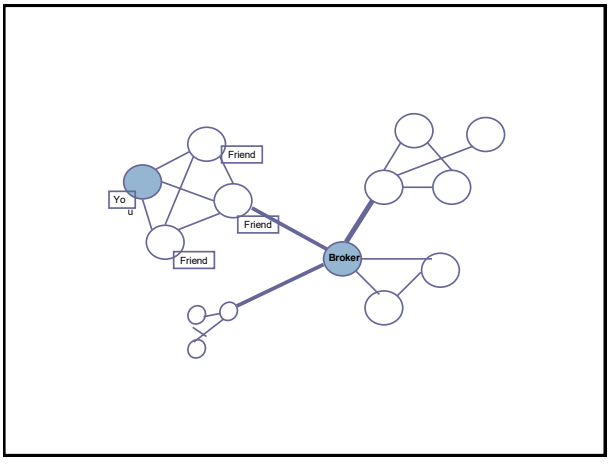

Trust Back-up talent Speed to consensus Emotional support, comfort Promotes cohesion	Diverse information Diverse talent Fosters Creativity Informal power Promotes competition

3

4

5

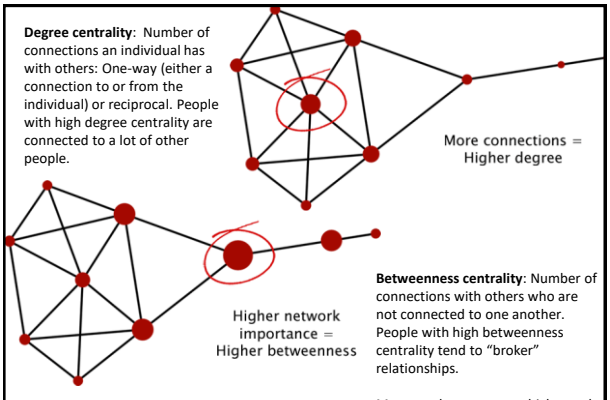

What is a Social Network?

6

- A pattern of informal social ties.
- Important assumptions
  - A move away from individuals to relationships
  - Business and friendship overlap (embeddedness)
  - Networks have economic benefits
  - The pattern of ties matter
- A description of the social structure between actors, mostly individuals or organizations.
  - Indicates the ways in which they are connected through various social familiarities ranging from casual acquaintance to close familiar bonds.

6

Degree centrality: Number of connections an individual has with others: One-way (either a connection to or from the individual) or reciprocal. People with high degree centrality are connected to a lot of other people.

Betweenness centrality: Number of connections with others who are not connected to one another. People with high betweenness centrality tend to "broker" relationships.

Measure the extent to which a node lies on the shortest path between other pairs of nodes

7

7

Networking and how it evolves…

2

- Process of creating a fabric of personal contacts who will provide support, feedback, insights, resources, information
- Broadly four ways in which we network and create new connections
  - Our current network refers us to new person
  - Self-similarity principle
  - Proximity principle
  - Shared Activity Principle

8

Self-Similarity Principle

We are inclined to pick ties that have similar intellectual backgrounds, training, experiences, and ways of making inferences from incomplete information

Reasons:

- **Trust** – We believe we can reliably predict the behavior of others who have similar training, backgrounds, experience
- **Comfort Zone** – Less challenge to core beliefs, less effort, low risk of Rejection, share commiserations
- **Utility in Mind** – immediate problems are in our narrow area, so people like ourselves appear to have quick utility
- **Self-Affirmation** – Strengthens our confidence and ego
- **Joy of Spontaneous Agreement** – we "click" more often with self-similars

Limitations:

- Access to **Discrepant Information** is minimized
- **Problem solving** and **Creativity** is stifled
- It creates ***Echo Chambers***

9

Principles of networking: Proximity Principle

17

- We are inclined to pick ties that are in the same departments, units, and teams as ourselves.
- Reasons
  - Frequency
  - Organizing things by distance
- Limitations?
  - Echo chambers – Beliefs, ideas reinforced due to closed system
  - Makes your network structurally equivalent to the others like you – lowers your differentiation

Uzzi, B., & Dunlap, S. (2005). How to build your network. *Harvard Business Review*, *83*(12), 53.

10

Shared Activity Principle

- A cross-section of disparate individuals around a common point of interest
- Shared activities are the secret for building strong networks because focus on activity not on background commonalities.

Examples :

- **Team or Partner Sports**
- **Community Service**
- **Cross Functional Teams**
- **Volunteer Groups**

Three Properties that Maximize Shared Activities:

Passion – Busy people consistently make time for their passions

Interdependence – At least two people are needed; passions get satisfied by depending on someone else

Stakes – Have something at stake (gradation of winning or losing)

Why It builds Brokerage Networks:

Diversity -

A cross-section of people engage in the same activity

Trust -

- *Common goals* align interests
- *Profiling* and perceived transparency of behavior/character
- *Bonding* from celebrating victory & commiserating over defeats

Brokerage -

Meet people with contacts to new social circles

Uzzi, B., & Dunlap, S. (2005). How to build your network. *Harvard Business Review*, *83*(12), 53.

11

Alternate views on networking

14

Networking is for those…

- Who are Incompetent
- If I am good then my brilliance will be noticed and will show through.
- Unethical
- Who want to play games and politics in organizations
- Manipulative
- I do not have time to network
- I am not good at networking-I am shy, I am introvert, I have never had friends, I have been cheated before, I have been ignored earlier

12

Myth and Reality

15

- Self-help books, Youtube podcasts! ? larger your network, the better your chances of success…
  - Think of your Facebook/Whatsapp friends… How many of them do you really interact? Very few!
  - A large part of networking is a waste of time!! (McKeown, 2015)
- Rather than the number or quantity of connections, what is important is the quality of your connections!!
- Understand Dunbar's number (150); we can entertain only limited number of stable relationships.

Gonçalves, B., Perra, N., & Vespignani, A. (2011). Modeling users' activity on twitter networks: Validation of dunbar's number. *PloS one*, *6*(8), e22656.; Dunbar, R. I. (1992). Neocortex size as a constraint on group size in primates. *Journal of Human Evolution*, *22*(6), 469-493.

13

Networking: some suggestions

13

- IF, Exercising ≡ Physical fitness
- Then, Networking ≡ Relational fitness, that is, "health / resilience of network of social and professional contacts" (Kuwabara, 2013)
  - ''Networking'' emphasizes relationship initiation, often between strangers (Boyd & Ellison, 2007).
  - Not about knowing the mechanics of using LinkedIn or Facebook
  - Dedicating time, energy, resources to develop social ties

14

Takeaways: Social Networks

- **Develop a "diversified portfolio" of social contacts**
  - A mix of redundant (social support & trust) and entrepreneurial (information & control benefits) ties.
  - Include those that are "undervalued"
- **Expand networks through**
  - Shared activities – try something different
  - Seek opportunities to use your human and social capital that can assist others
  - Use of brokers – do you know who they are?
- **Find opportunities to broker**
  - Become a resource broker and make yourself non-substitutable
  - Actively "maintain" your social network (e.g. trust); Be generous with resources to build the trust and credibility you need
  - Seek goals that are aligned with organizational goals and generate commitment for your resources.

16

What kind of risks do people take when speaking up in workplaces?

1

- Risk of looking ignorant (when asking for help)
- Risk of looking incompetent
- Risk of being seen as intrusive
- Risk of being seen as negative

1

What is Voice (or speaking up)?

- Informal and/or discretionary communication
- Of ideas, suggestions, concerns, information
- About problems, or opinions about work-related issues
- To persons who might be able to take appropriate action
- With the intent to bring out improvement or change (Morrison, 2014)

2

Two critical reasons (among many others) why people do not speak up in teams/workplaces

3

- Fear
  - Fear of stalled promotion/transfer
  - Not getting rewards
  - Negative actions by supervisors
  - Being made fun of by team members
  - Looking incompetent
  - Labelled as problem creator
- Futility
  - "My suggestions will never be implemented"
  - "Anyways, nobody listens here, so why provide suggestions
  - I will never know what gets implemented

3

Why people do / don't speak up?

	Motivators	Inhibitors
Individual disposition	Extraversion, Conscientiousness	Achievement orientation
Job and organizational perceptions	Organizational identification Job satisfaction Organizational support	Detachment Powerlessness
Emotions	Anger Psychological safety	Fear Futility Image or career risks
Supervisor behavior	Ethical leadership Transformational leadership Consultation	Abusive leadership
Context	Caring climate Formal voice mechanisms	Job and social stressors Hierarchical structure Climate of fear or silence

Morrison, E. W. (2014). Employee voice and silence. *Annu. Rev. Organ. Psychol. Organ. Behav.*, *1*(1), 173-197.

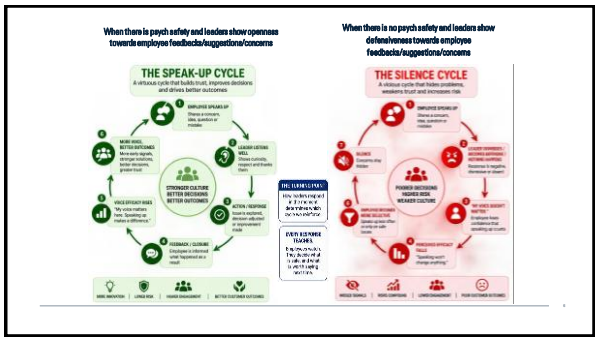

4

Psychological safety

- Shared belief of team members that it is ok to
  - take risks,
  - express ideas and concerns,
  - speak up with questions,
  - and admit mistakes

  Without fear of negative consequences

5

6

Benefits of psychological safety

- enhances information sharing among employees
- increases job satisfaction and fosters happiness at work
- encourages and supports learning behaviors
- boosts performance and profitability
- improves employee engagement and commitment
- promotes a diverse and inclusive workplace culture
- inspires creativity and innovation among employees
- reduces employee turnover
- enhances the company's reputation and brand image
- promotes positive work environments and employee relationships

7

Psychological safety: the last line of defence

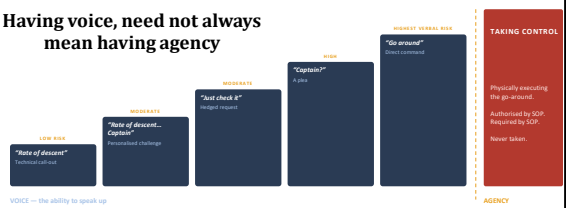

Implication: training FOs to "be assertive" cannot work while the antecedent conditions stay untouched.

8

THE CRITICAL DISTINCTION

Having voice, need not always mean having agency

The FO had enough psychological safety to speak — but not enough to act. The gap between the two thresholds is where 190 lives were at stake.

9

Why nothing changed: single-loop vs double-loop learning

Single-loop learning
Fix the error inside existing assumptions

- Detect deviation → correct → move on; goals and norms never questioned
- AIXL after Mangalore: documents revised, compliance reports filed, action items closed
- When flagged for cutting SMS training 5 → 3 days, AIXL amended the manual to legitimise the cut

Double-loop learning
Question the assumptions that produced the error

- Why does our culture subordinate safety to operations?
- Why do authority gradients persist despite CRM training?
- Why has compliance paperwork become a substitute for change?
- Never asked at AIXL — so the same failure recurred

Espoused theory vs theory-in-use: AIXL's espoused theory (SMS manuals, CRM syllabi, action-taken reports) said safety first. Its theory-in-use — revealed by the investigation — prioritised operations, tolerated deviation and suppressed dissent. It produced documentation, not change.

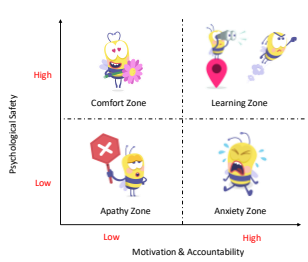

10

Why Organisations Don't Learn?

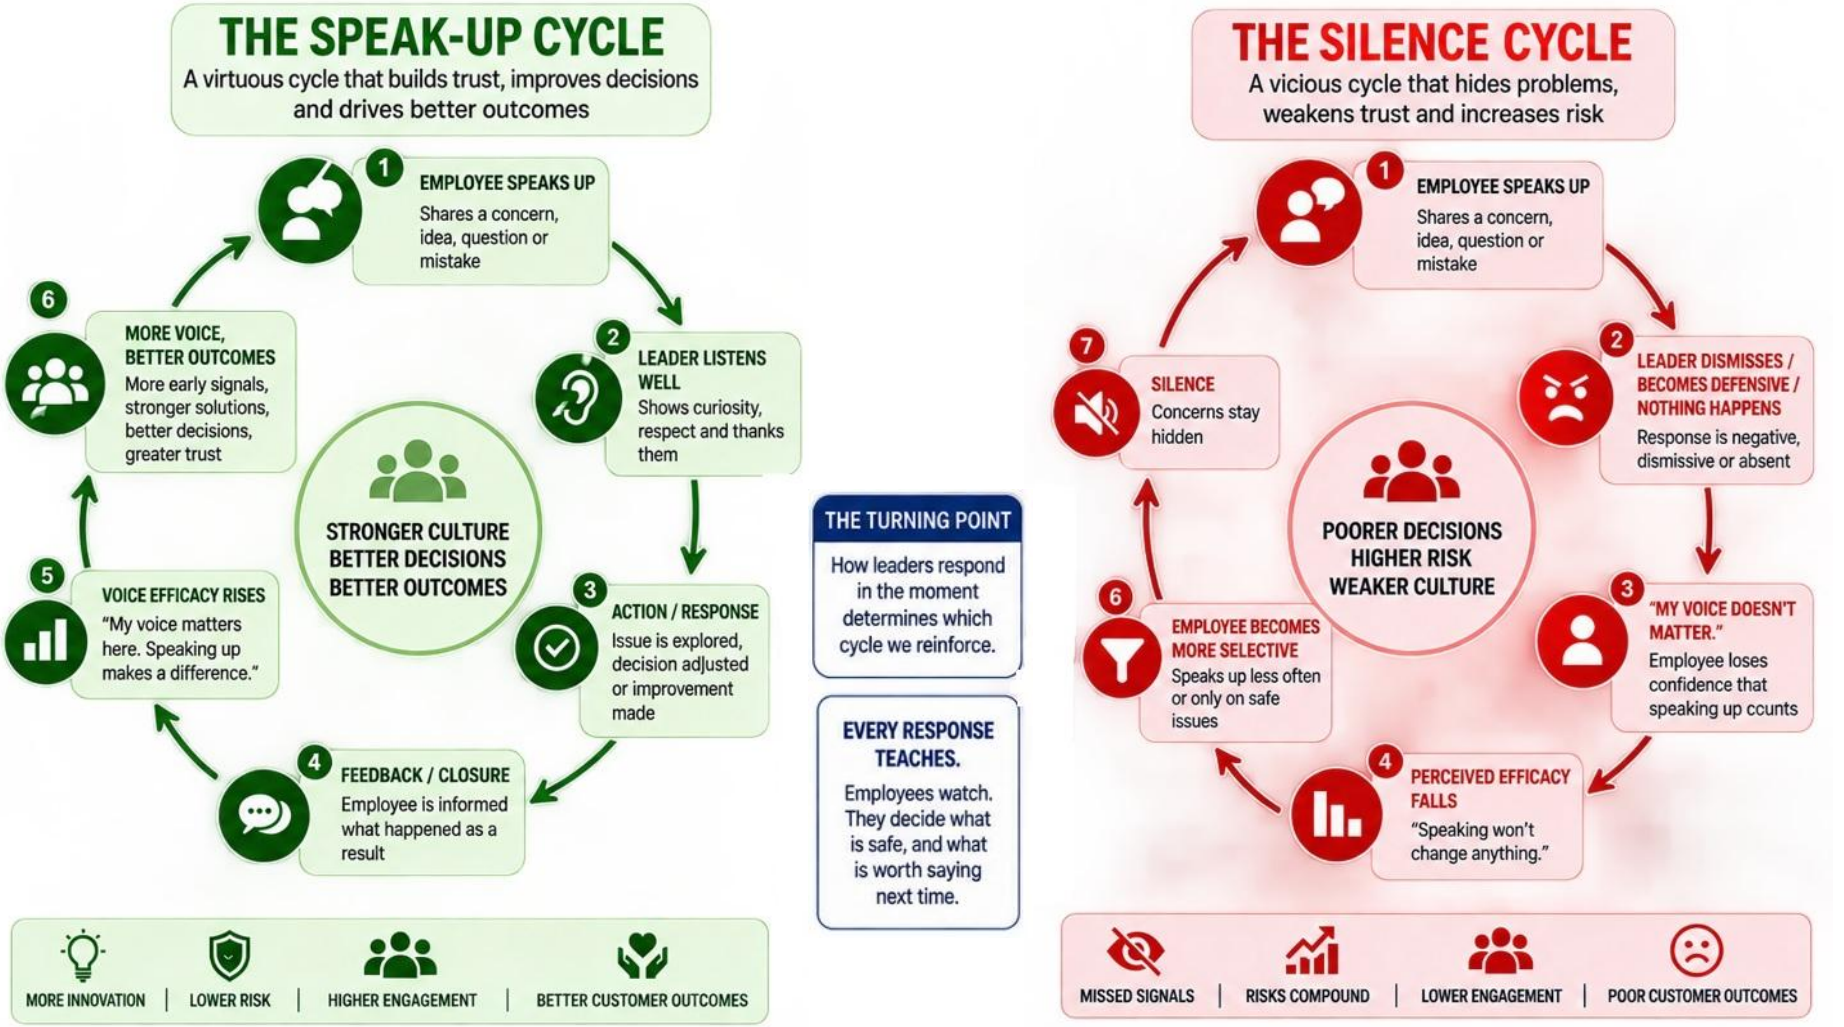

- **Bias towards success**
  - Destigmatise failure
  - Growth mindset
  - Consider potential
  - Use data-driven decision making
- **Bias towards action**
  - Build breaks
  - Take time to think
  - Encourage reflection
- **Bias towards fitting-in**
  - Cultivate strengths
  - Remove conformity
  - Lead by example
- **Bias towards experts**
  - Encourage employees to own problems that affect them
  - Give varied experience
  - Empower employee to use experience

Source: 'Why organizations don't learn?', HBR, November 2015

11

12

THE SPEAK-UP CYCLE
A virtuous cycle that builds trust, improves decisions and drives better outcomes
1 EMPLOYEE SPEAKS UP
Shares a concern, idea, question or mistake
2 LEADER LISTENS WELL
Shows curiosity, respect and thanks them
3 ACTION / RESPONSE
Issue is explored, decision adjusted or improvement made
4 FEEDBACK / CLOSURE
Employee is informed what happened as a result
5 VOICE EFFICACY RISES
"My voice matters here. Speaking up makes a difference."
6 MORE VOICE, BETTER OUTCOMES
More early signals, stronger solutions, better decisions, greater trust
STRONGER CULTURE
BETTER DECISIONS
BETTER OUTCOMES
MORE INNOVATION | LOWER RISK | HIGHER ENGAGEMENT | BETTER CUSTOMER OUTCOMES
THE TURNING POINT
How leaders respond in the moment determines which cycle we reinforce.
EVERY RESPONSE TEACHES.
Employees watch. They decide what is safe, and what is worth saying next time.
THE SILENCE CYCLE
A vicious cycle that hides problems, weakens trust and increases risk
1 EMPLOYEE SPEAKS UP
Shares a concern, idea, question or mistake
2 LEADER DISMISSES / BECOMES DEFENSIVE / NOTHING HAPPENS
Response is negative, dismissive or absent
3 "MY VOICE DOESN'T MATTER."
Employee loses confidence that speaking up counts
4 PERCEIVED EFFICACY FALLS
"Speaking won't change anything."
6 EMPLOYEE BECOMES MORE SELECTIVE
Speaks up less often or only on safe issues
7 SILENCE
Concerns stay hidden
POORER DECISIONS
HIGHER RISK
WEAKER CULTURE
MISSED SIGNALS | RISKS COMPOUND | LOWER ENGAGEMENT | POOR CUSTOMER OUTCOMES

What is negotiation?

2

"Negotiation is a process that occurs when two or more parties exchange goods or services (and even non-tangibles) and attempt to agree on the exchange rate for them" (adapted from Robbins et al., 2017)

It is an "interpersonal decision-making process when we cannot achieve our objectives single-handedly (i.e., a process to get what you want when parties are interdependent" *(Thompson, Wang & Gunia, 2010)*

1

Negotiation overview

2

- Know yourself (needs, wants, goals)
- Know others (their needs, wants, goals)
- Know the Situation (Deal/No deal, distributive/integrative, Conflict)

2

ELEMENTS OF NEGOTIATIONS

Issue: What is (are) the thing(s) being negotiated?

- Specific topic, variable, or dimension on which the parties are trying to reach agreement.
- E.g.
  - Maya-Prof.Das negotiating the price of the Software

Position : What people say they want?

- Stance taken on an issue
- E.g.
  - Maya: I want INR 12,00,000 for a subscription

Interests : Why they want it?

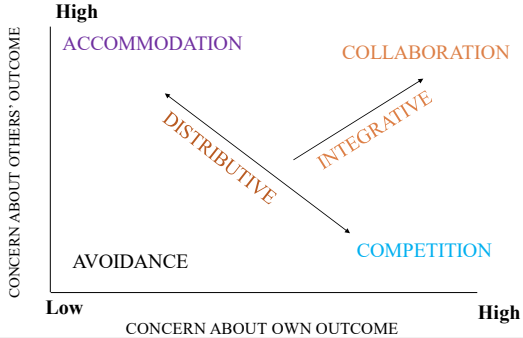

- Underlying concerns affected by resolution
- E.g.
  - Maya: Company requires a prestigious client like SOM; adds to credibility and visibility

3

MANAGING NEGOTIATIONS

DUAL CONCERN - MODEL

4

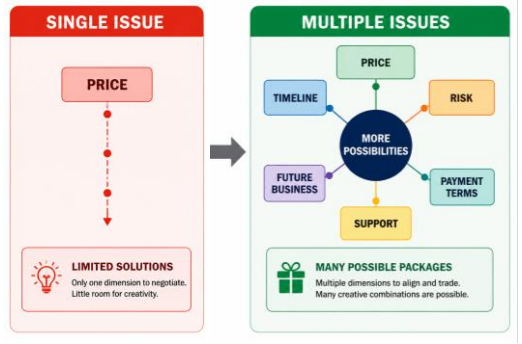

4

Distributive vs. Integrative

Characteristics	Distributive	Integrative
Goal	Get as much of the pie as possible	Expand the pie so everyone is satisfied
Motivations	Win-lose	Win-win
Focus	Positions	Interests
Information sharing	Low	High
Duration focus	Short term	Long term

(Robbins et al., 2017)

5

Issues help create possibilities. Priorities help create value.

Two negotiators can be discussing exactly the same set of issues, but because they value those issues differently, opportunities for integrative agreements emerge.

6

How To Trade Issues?

Importance to Me	Importance to Them	What to do
Low	High	Concede strategically
High	Low	Protect; seek compensation
High	High	Negotiate carefully
Low	Low	Settle quickly

7

STEPS OF NEGOTIATING

8

- Prepare
- Influence
- Signal
- Propose
- Exchange offers
- Close
- (Dis)Agree

8

INFORMATION

9

- Be clear and well informed
- Your starting point
  - What do you want
  - What do you really need
  - What are you willing to sacrifice in exchange
  - What are your priorities of needs and wants?
  - What are your pressures, limits, or constraints:
    - Economics
    - Time
    - Legal

9

INFORMATION (Cont...d)

10

- The other party's position
  - Needs
  - Wants
  - What might they sacrifice
  - Their pressures and constraints
- What issues are common to both parties?
  - Objectives
  - Constraints
- Point of conflict
  - Do I understand where conflict might occur?
  - What leeway will I allow myself?
  - How will I address, and try to resolve, points of conflict?

10

COMMON NEGOTIATING MISTAKES

11

- Inadequate preparation
- Not trying to problem solve
- Not listening
  - Tone
  - Key issues
  - Signals of others
- Use authority/Pulling rank/browbeating
- Letting price dominate over other interests

11

COMMON NEGOTIATING MISTAKES (Cont...d)

12

- Scoring points for personal satisfaction
- Being aggressive
- Arguing
- Ignoring conflict
- Impatience
- Failing to end on a positive note
- Neglecting other sides' concerns
- Overcoming partisan perceptions (your side as 'morally upright' vs 'vilifying the opposition')

12

Tricky Tactics – need to be careful

13

- Deliberate deception with phony facts
  - Cross-check the facts independently
- *Ambiguous authority*-after getting a firm agreement, indicate that someone else's approval is needed.
  - Before starting on give and take, find out who has authority on the other side
  - Insist on reciprocity, neither side committed to the draft
- *Good guy/bad guy routine*. Two people on the same side stage a quarrel. One tough and the other apparently accommodating
  - Recognize the psychological manipulation
  - Ask for reason
- *Stressful situations*. Sometimes setting deliberately designed to make you want to conclude quickly
  - If the physical surroundings appear prejudicial, do not hesitate to say so
  - Suggest changing places, taking a break, adjourning to a different place and time

13

POWER AND INFLUENCE

IGP Session 6

1

"Strike in Space" → the case!!

Gerald P. Carr, Edward G. Gibson, and William R. Pogue, August 1973

https://www.nasa.gov/mission_pages/skylab/missions/skylab_manned.html

2

Why does conflict arise? (Antecedents)

- Conflict, power, and politics are natural outcomes of organizing

due to "diff. in objectives!" (which can change over time as well)

3

→ what influenced (came before) the conflict?

"Antecedents" of Conflict

- Goal Incompatibility
- Differentiation
- Task Interdependence
- Limited Resources

4

What is Power?

- Power is the *potential* ability to influence the behaviour of others.
  - *Potential* because one can have power but decide against exercising it
- Is Power a good thing?
- Do people shy away from using power?

5

Sources of power

- Positional / formal power: Based on an individual's position in an organization
  - Coercive power: Depends on fear of the negative results from failing to comply
    - Application of physical sanctions, controlling by force of basic physiological or safety needs.
  - Reward power: Compliance achieved based on the ability to distribute rewards that others view as valuable.
    - Financial: Pay rates, raises, and bonuses
    - Non-financial: Recognition, promotions, interesting work assignments
  - Legitimate power: Represents formal authority to control and use organizational resources based on structural position in organization

6

Source of Power

7

- Personal power: Comes from an individual's unique characteristics
  - Expert Power: Influence based on expertise, special skill, or knowledge
  - Referent power: Influence based on identification with a person who has desirable resources or personal traits
- Information power: Possessing knowledge / information which others have a need for
- Relational/Network power: Comes from forming strong relationships
  - Relationships across departments, divisions, units
  - Becoming central by networking, controlling important resources, information

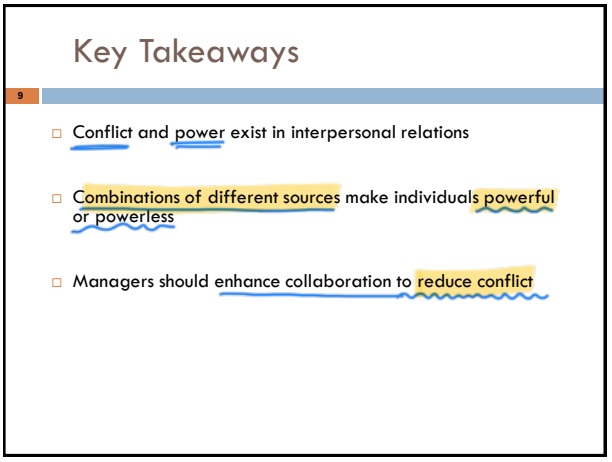

French, J.R.P. and Raven, B. (1959), "The basis of social power", in Cartwright, D. (Ed.), Studies in Social Power, University of Michigan Press, Ann Arbor, MI, pp. 529-69
Soga, L., Balade-Ogunfodun, Y., Islam, N., & Amankwah-Amoah, J. (2022). Relational power is the new currency of hybrid work. *MIT Sloan Management Review*.

7

Post strike

- "It's apparent to us… that the scheduling was too ambitious," (Mission Control)
- The "first sensitivity session" in space (Carr)
- *"We got along together just fine. We were bound by a common enemy: Mission Control" – William Pogue*

8

Key Takeaways
9
Conflict and power exist in interpersonal relations
Combinations of different sources make individuals powerful or powerless
Managers should enhance collaboration to reduce conflict

9

1

POWER AND INFLUENCE

1

Levers of Influence

- Power
- Status (Respect, Prominence, Prestige)
- Tactics you use to influence

Fiske, S. T., Dupree, C. H., Nicolas, G., & Swencionis, J. K. (2016). Status, power, and intergroup relations: The personal is the societal. *Current opinion in psychology*, *11*, 44-48.

2

Influence Tactics (1/2)

- Rationality (Both)
  - Using data and information to make a logical argument
- Exchange (Task)
  - Offering to do something for doing what one wants
- Inspirational Appeal (Both)
  - Appealing to values, ideals of enhancing target's confidence
- Pressure (task)
  - Use of demands, threats, continual checking to influence someone
- Legitimating (task)
  - Establish appropriateness of verifying authority
- Coalitions (task)
  - Seeking help from other to influence a target to do

Kipnis, D., Schmidt, S. M., & Wilkinson, I. (1980). Intraorganizational influence tactics: Explorations in getting one's way. *Journal of Applied psychology*, *65*(4), 440; Lee, S., Han, S., Cheong, M., Kim, S. L., & Yun, S. (2017). How do I get my way? A meta-analytic review of research on influence tactics. *The Leadership Quarterly*, *28*(1), 210-228.

3

Influence Tactics (2/2)

- Ingratiation (relationship)
  - Wining over by flattery or compliments
- Consultation (Both)
  - Seeking participation in activity for which support is desired
- Personal Appeals (relationship)
  - Appeal to a feeling of friendship or loyalty
- Apprising (Both)
  - Explaining how support can bring personal benefits to one's career.
- Collaboration (Both)
  - Providing resources if one will carry out a request

Kipnis, D., Schmidt, S. M., & Wilkinson, I. (1980). Intraorganizational influence tactics: Explorations in getting one's way. *Journal of Applied psychology*, *65*(4), 440; Lee, S., Han, S., Cheong, M., Kim, S. L., & Yun, S. (2017). How do I get my way? A meta-analytic review of research on influence tactics. *The Leadership Quarterly*, *28*(1), 210-228.

4

Influence Tactics

- Rationality, Collaboration, Apprising, Consultations, and Inspirational appeals help in task-oriented outcomes.
- Collaboration, Consultations, Inspirational appeals, apprising, and rationality helps in relationship-oriented outcomes.

Lee, S., Han, S., Cheong, M., Kim, S. L., & Yun, S. (2017). How do I get my way? A meta-analytic review of research on influence tactics. *The Leadership Quarterly*, 28(1), 210-228.

5

STATUS

- Nobel Laureate economist, John Harsanyi, said that "apart from economic payoffs, social status seems to be the most important incentive and motivating force of social behavior."
- Status: The extent to which an individual or group is respected, regarded or admired by others.
  - Status: "How highly are you regarded?"
  - Race, Class, Gender
    - Status can shift
    - Individual and societal relations reinforce status-Competence beliefs

6

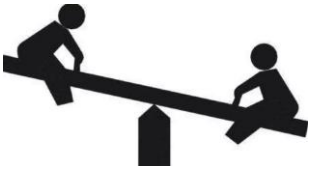

Core aspects of Workplace Status

- Respect
  - Derived from possession of key attributes and accomplishments that are valued by others
- Prominence
  - Extent to which one stands out and receives level of attention compared to other members.
- Prestige
  - Informed by personal and position-based "deference"; Based on qualities most likely to contribute to success (competence, commitment, leadership). Others regard as distinguished or accomplished.

Djurdjevic, E., Stoverink, A. C., Klotz, A. C., Koopman, J., da Motta Veiga, S. P., Yam, K. C., & Chiang, J. T. J. (2017). Workplace status: The development and validation of a scale. *Journal of Applied Psychology*, *102*(7), 1124.

7

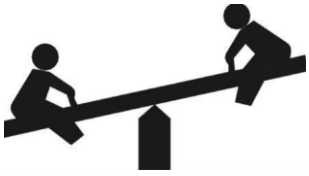

Push: Raising my status with respect to others

- Asserting Dominance
- Competing
- Exclusions
- Criticism

8

"Pull: Helping elevate others' status"

Collaboration	v/s Competence
Supporting	v/s Dominate
Inclusion	v/s Exclude
Complimenting	v/s Criticize
Listening and following up	v/s ignore

9

Key Takeaways

- Each of us have multiple levers through which we can influence
- It is the willingness to use our status, power, to influence that makes us powerful or powerless
- The use of status, power, or tactics on their own are neither good or bad. It is the outcomes you wish to achieve with them that makes it positive or negative in valence

10

Why Conversations become difficult?
↳ Something imp. is at stake,
↳ damage the relationship?
↳ identity on the line.
↳ gap b/w what people think & say !!

DIFFICULT CONVERSATION

1

1

Before the conversation

- What happened? Your story? Theirs?
- Understand emotions
- What's at stake?
- Check your purpose
  - Whether to raise the issue?

2

Disagreement

- Trying to win an argument is a good way to start a fight!!!
- Practicing Receptiveness
  - A better way to disagree
- A constructive disagreement
  - Any disagreement that increases willingness to talk to each other again.

3

Naïve Realism: What's wrong with everyone?

- Most people believe they are accurate and objective, rarely stopping to consider how their context distorts their perceptions or conclusions.
- People attribute the other side's disagreement to a lack of information or intelligence
- Trying to persuade is a losing battle. Instead, consider what information you might be missing and what a smart, reasonable, kind person may see the world differently

4

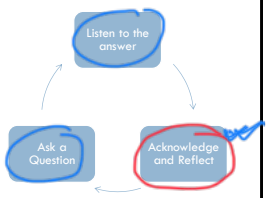

Solution: Receptiveness

- Willingness to access, consider, and evaluate supporting and opposing views in an impartial manner
  - Likely to put themselves in the physical presence of ideas they disagreed with
  - Willing to pay attention to the arguments for those ideas when they did hear them
  - Subject those arguments to the same level of critical scrutiny as for their own side
- Components: Emotional equanimity, intellectual curiosity, respect towards opponents, tolerance of taboo issues
- Not about compromising or changing your mind

5

Demonstrate receptiveness: Listening Triangle

- Signaling that your goal is to learn about and understand your counterparts' perspectives
- People tend to assume we understand others even when they don't
- To ensure and make them feel understood, practice the listening triangle
- Practice using trivial topics before more challenging ones

6

HEAR Framework

H	E	A	R
Hedge your Claims	**Emphasize agreement**	**Acknowledge other perspectives**	**Reframe to the positive**
I think it's possible that	*I think we both want to*	*I understand that*	*I think it's great when*
This might happen because	*I agree with some of what you are saying*	*I see your point*	*I really appreciate it when*
Some people tend to think	*We are both concerned with*	*What I think you are saying is*	*It would be so wonderful it*

Minson, J. (2026). How to disagree better? Orion Ignite, UK.

7

During the Conversation

- Stay focused on your goals
- Demonstrate receptiveness by using the listening triangle
- Use the HEAR Framework to communicate receptiveness
  - Hedge your claims
  - Emphasize Agreement
  - Acknowledge the other perspectives
  - Reframe to the positive
  - Avoid explanatory words
- Share the personal stories that led you to hold a belief
  - Tell your own experiences and convictions
  - Show a little vulnerability as it doesn't sound like bragging/lecturing

8

Ways to Build Receptiveness

- Choose to be around receptive people, bring more such people and incentivize everyone to keep putting effort
- Create processes that build good habits will reduce disagreement in future
- Start early in life
- Embrace AI coach/technology
  - No risk of real conflict
  - Your counterpart can argue any side with equal facility

9

TEAM MEMBER ROLES

1

Team Role

"A tendency to behave, contribute and interrelate with others in a particular way"

….provides an understanding of a person's behavior in relationship to another while ensuring the progress of a team

2

Our patterns/roles

- Tend to develop and mature and also change with experience and conscious attention
- When applied consciously help improve team functioning and efficiency

3

Team Role System

Nine team roles type

Each type has a typical behavioural strength and a characteristic weakness

4

People oriented → CO, TW, RI
Thinking Roles → Plant, ME, Sp.
Action - oriented → Shaper, CF, Impl.

People Oriented Roles	Thinking Roles	Action Oriented Roles
Coordinator	Plant	Shaper
Team worker	Monitor Evaluator	Implementer
Resource Investigator	Specialist	Completer-Finisher

5

people focused!

Co-ordinator (CO)

People Oriented Roles

Role: To control and organize the activities of the team, making best use of the resources available

As a person: Mature, calm, self-confident, listens well, fair minded, quietly charismatic

Team role contribution	Possible weaknesses	Non Allowable Weaknesses
Clarifies goals	Delegates personal work	Takes personal credit for the effort of the team
Promotes effective decision making	Can be seen as manipulative	Inclination to be lazy
Good chairperson		
Delegates well		

Strong leadership quality!

6

people-oriented

Team worker (TW)

People Oriented Roles

Role: To help individual members to achieve team effectiveness

As a person: Social oriented, mild, likeable, sensitive, perceptive

Team role contribution	Possible weaknesses	Non Allowable Weaknesses
Counsellor and conciliator	Indecisive	Avoids pressure situations
Improves intra-group communication	Ostentatious behaviour	Never giving their opinion
Diffuses conflict	Competing for status	
Builds on suggestions		

7

people-oriented!!

Resource Investigator (RI)

People Oriented Roles

Role: To explore outside resources and develop contact that may be helpful

As a person: Enthusiastic, extrovert, communicative, curious, and works well under pressure

Team role contribution	Possible weaknesses	Non Allowable Weaknesses
Makes and develops new contacts	Takes it easy when pressure is off	Neglects to make follow-up arrangements
Explores new opportunities	Rapid loss of interest	Letting down people
'Fixer'	Over-optimistic	
	Poor follow through	

8

Plant (PL)

Thinking Roles

Role: To act as a prime source of ideas and innovation for the team

As a person: Individualistic, intellectual, serious minded, unorthodox, creative

Team role contribution	Possible weaknesses	Non Allowable Weaknesses
Brings creative ideas	'up in the clouds'	Strong personal ownership of ideas
Add imagination	Ignore practical details and goals	Looks down on others
Focus on major strategic issues	Often feels frustrated	Can be impatient with the 'other'

9

Monitor Evaluator (ME)

Thinking Roles

Role: To analyze ideas and suggestion both from within and outside the team and to evaluate their feasibility and practical value in terms of team's objectives

As a person: Sober, strategic, critical, skeptical, slow but steady

Team role contribution	Possible weaknesses	Non Allowable Weaknesses
Seeing and judging a range of options	Lacks drive and ability to inspire	Constant harsh criticism
Critical thinking	Overly critical	Does not pay attention to feelings
Developing ideas to fruition	'Punch up' with plants	Stopping progress of team
Stopping unsound idea	Cynicism	

10

Specialist (SP)

Thinking Roles

Role: To be the subject matter expert, advice, consult the group

As a person: Conscientious, curious, able to concentrate, loner

Team Role Contribution	Possible Weaknesses	Non-allowable weaknesses
"The expert"	Focuses too much on technical details	Does not want to get involved in broader team issues
Single minded, self starting, dedicated	Too theoretical with little concern for link to the big picture	"Not my problem" syndrome
Provides knowledge and skills in short supply		

11

Shaper (SH)

Action Oriented Roles

Role: To give shape and form to the team's activities

As a person: Outgoing, dynamic, challenging, has drive and courage, self-confident

Team Role Contribution	Possible Weaknesses	Non-allowable weaknesses
Providing direction in discussions	Argumentative, provocative	Consistently tramples on people's feelings
Objective setting	Not always likeable	Inability to recover situation with good humor or apology
Challenging inertia and complacency	Prone to irritation	Bullying
Leadership		

12

Implementer (IM)

Action Oriented Roles

Role: To translate general concepts and plans into a practical working brief and to carry out that brief in a systematic fashion

As a person: Disciplines, reliable, conservative, hard working, predictable, methodical

Team role contribution	Possible Weaknesses	Non-allowable weaknesses
Organizing	Inflexible and unresponsive to new ideas	Obstructs change
Dealing with practical details	Unconstructive criticism	Unwilling to adapt
Planning-turning strategies into actions		
"workhorse"		

13

Completer-Finisher (CF)

Action Oriented Roles

Role: To ensure that the team's efforts are as near perfect as possible and that nothing gets overlooked

As a person: Conscientious, orderly, anxious, painstaking

Team Role Contribution	Possible Weaknesses	Non-allowable weaknesses
Following through	Worrying too much	Negative thinking
Quality control, attention to detail	Perfectionism	Obsessive behaviour
Providing a sense of urgency	Losing sight of the overall plans	Rushing the planning stage
Stop omissions	Reluctant to delegate	Always focusing on small details and mistakes in a way which de-motivates

14

Belbin's Team Roles Model

People Oriented Roles	Coordinator	Brings order into the team	Thought Oriented Roles	Plant	Comes up with innovative, ground-breaking solutions	Action Oriented Roles	Shaper	Questions assumptions
	Team Worker	Provides support to the team in a diplomatic way		Monitor Evaluator	Assesses team decisions analytically and critically		Implementer	Brings self-discipline
	Resource Investigator	Develops outside contacts		Specialist	Expert in a particular subject matter		Completer Finisher	Pays attention to the smallest details and makes sure thing are done right

15

The team roles fall into three categories for each person

Each category can be one of these for a person!

16

What role do I play?

- Generally, you want to play to your preferred roles whenever possible.
- Pick the one best suited to the setting, set of tasks or other people you are with.
- Sometimes a role outside your top 3 is the one best suited to the situation; think of this as "flexing or stretching", especially if the role has a lower score.
- Try to let others fill your weakest roles.

17

UNBALANCED TEAM PROBLEMS

EXAMPLES

- If team members have similar weakness=
  - The team as a whole may tend to have that weakness
- If team members have similar team strength
  - They may tend to compete (rather than co-operate) for the team tasks and responsibilities that best suit their natural styles

18

Too many cooks spoil the …

- Too many PLANTS
  - All brainstorming, no action
- Too many MONITOR EVALUATORS
  - Analysis paralysis
- Too many SHAPERS
  - Conflict!

19

Manage your allowable weakness

- Forewarned is forearmed!
  - Let us say you are a SHAPER, you are likely to hurt other people's feelings as the team forges ahead
- Ensure that allowable weakness does not become disallowable
  - Lose a PLANT's attention during a meeting because they are dreaming up a creative solution-OK
  - PLANT forgets to come to the meeting because they are thinking of something else-NOT OK

20

While Using Team Role Typology

- Be aware of roles you assume naturally
- Are there other roles that are needed to be played?
- Mindfully fill the gap
- What if one person is playing more than one or two roles?
  - Beware of labeling people
    - Everyone can perform and switch between 4-6 roles
- Use with caution, just because the roles are present does not guarantee quality outcome

21

TEAMS

1

1

Team definition

2

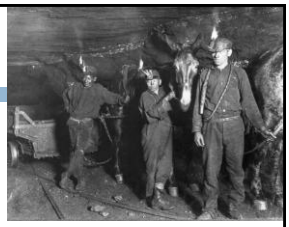

- (a) Two or more individuals who
- (*b*) Socially interact (face-to-face or, increasingly, virtually)
- (*c*) Possess one or more common goals
- (*d*) Are brought together to perform organizationally relevant tasks;
- (*e*) Exhibit interdependencies with respect to workflow, goals, and outcomes
- (*f*) Have different roles and responsibilities;
- (*g*) Are together embedded in an encompassing organizational system, with boundaries and linkages to the broader system context and task environment.

Mathieu, J. E., Gallagher, P. T., Domingo, M. A., & Klock, E. A. (2019). Embracing complexity: Reviewing the past decade of team effectiveness research. *Annual Review of Organizational Psychology and Organizational Behavior, 6*, 17-46.

2

Teams then…

3

- Stable membership
- Single membership
- Shared common goals
- Defined roles
- Common location
- Defined tasks

3

Teams now…

4

- Fluid membership
- Multiple membership
- Swift teams
- Virtual location
- Ambiguous tasks and responsibilities

Tannenbaum, Mathieu, Salas, Cohen (2011)

4

5

Understanding Team Evolution

5

Stages of Team Development

- Group evolution Model
- Punctuated Equilibrium Model

Gersick, C. J. (1988). Time and transition in work teams: Toward a new model of group development. *Academy of Management Journal*, *31*(1), 9-41.
Tuckman, B. W. (1965). Developmental sequence in small groups. *Psychological Bulletin*, *63*(6), 384.

6

Stages of Team Development (Team Life Cycle)

- Forming
- Storming
- Norming
- Performing
- Adjourning

Tuckman, B. W. (1965). Developmental sequences in small groups. Psychological Bulletin, 63(6), 384- 399.
Tuckman, B. W., & Jensen, M.A.C. (1977). Stages of small-group development revisited. Group and Organization Studies, 2(4), 419-247.
Bonebright, D. A. (2010). 40 years of storming: a historical review of Tuckman's model of small group development. Human Resource Development International, 13(1), 111-120.
https://opentext.wsu.edu/organizational-behavior/chapter/9-2-group-dynamics/#:~:text=The%20punctuated%2Dequilibrium%20model%20of,than%20groups%20that%20are%20not

7

Forming

8

- Team members first come together
- Orientation phase
- Becoming acquainted, understanding skill-sets
- Discussion of team goals, individual goals, roles, ground rules, timelines etc.

8

2 Storming

9

- Emergence of conflicts
  - Personality related
  - Working tyles
- Danger of factions, cliques getting formed
- Some members feeling left out, isolated

9

3 Norming

10

- Norms of behaviors getting developed
- Individual idiosyncrasies getting accepted
- Members start to feel there are ‘group’, increasing cohesiveness

10

4 Performing

11

- High level cohesion, trust
- Improved efficiency/performance
- Clear strategies/processes for issue resolution

11

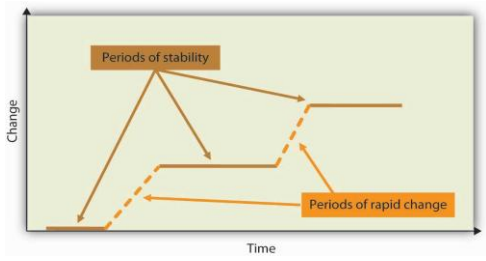

5 Adjourning

12

- Completing the task
- Breaking up the team
- Team members could feel anxiety, fear of future, sadness
- Leaders may want to evaluate the team, the lessons learnt

12

Punctuated Equilibrium Model

13

13

Punctuated Equilibrium Model

14

- Groups remain static for long periods of time
  - Here, change is incremental
- Revolutionary change happens in brief, punctuated bursts.
  - Groups cycle between storming and performing stages
- Transitional windows are opportunities for innovation & creativity

14

VIRTUAL TEAMS & CONFLICT

1

1

Virtual Teams?

- Also known as a **geographically dispersed team**, is a group of individuals who work across
  - time,
  - space and,
  - organizational boundaries with links strengthened by webs of communication technology.
  - Examples: teams across regions

2

Communications and Distance

Next Door
Likely to communicate weekly

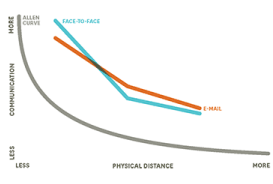

Same Aisle
Rare to communicate weekly

Different floor or across the globe
Slim chance of communicating weekly

3

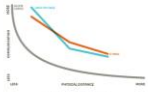

Allen's curve

The Allen Curve; HBR.org

Why distance still matters to teams — and what to do about it.

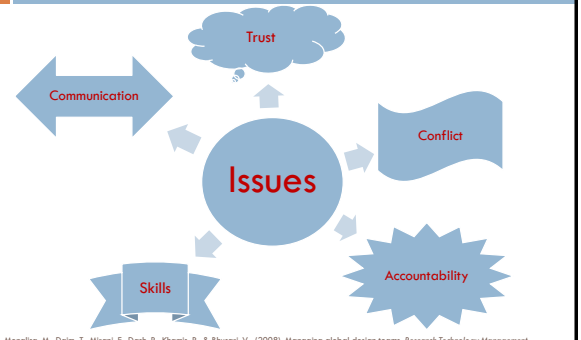

In the 1970s, MIT Professor Thomas Allen discovered that the farther apart workspaces are, the less communication there is between them: "we are four times as likely to communicate regularly with someone sitting six feet away from us as with someone 60 feet away, and we almost never communicate with colleagues on separate floors or in separate buildings." But thanks to email and other modern technology, physical separation isn't a problem anymore, right? Well....

The simple fact is that humans are creatures of habit — we're not going to go out of our way to reach out to new people. If your team is spread out across a floor or a building, this make sharing information that much more difficult. If redesigning the building isn't an option, how can you

Virtual Teams: Issues

Monalisa, M., Daim, T., Mirani, F., Dash, P., Khamis, R., & Bhusari, V. (2008). Managing global design teams. *Research Technology Management*, 51(4), 48–59.

5

What are conflicts?

- Conflicts are disagreements or frictions that emerge between individuals/teams at workplaces.
- Conflicts could be of different types

6

Conflicts: Types

- Task conflicts
  - Disagreement over the goal of a task or project or what you are trying to achieve
    - What are you trying to do?
  - Examples:
    - Agenda for a staff meeting
    - How the success of a new initiatives should be defined or measured?
    - Whether to prioritize revenue or customer satisfaction?
    - Whether the customers or employees should come first?
  - Positively associated with decision quality, commitment (Amason, 1996; Parayitam and Dooley, 2007).

Gallo, A. (2017). HBR guide to dealing with conflict.

7

Conflicts: Types

- Relationship conflict
  - A clash of personalities.
    - When one or both of you feel disrespected or hurt?
  - Examples
    - Snapping at each other in meetings
    - Exchanging snarky emails
    - Interrupting, or talking over, a colleague in a meeting
    - Arguing over who's right and who's wrong
  - Negatively associated with decision quality, group member satisfaction and commitment (Amason, 1996; Jehn and Mannix, 2001)

Gallo, A. (2017). HBR guide to dealing with conflict.

8

Conflicts: Types

- Status conflict
  - Disputes over relative status positions in group's social hierarchy.
    - Who's in charge or who deserves credit for the work?
  - Examples
    - Competing to run a high profile project
    - Arguing over or dominating shared resources
    - Competing for status symbols like corner office, latest technology, or an assistant
    - Jockeying for leadership, especially in a team without a formal leader
  - Negatively affects performance (Bendersky & Hays, 2012)

Bendersky, C., & Hays, N. A. (2012). Status conflict in groups. *Organization Science*, *23*(2), 323-340.

9

Conflicts: Types

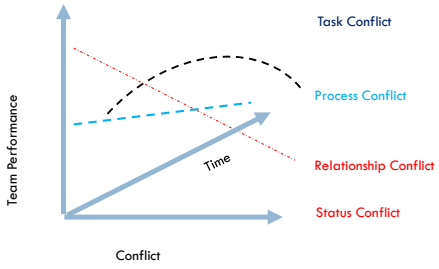

- Process conflicts
  - How to carry out a project, the means or process you use to reach your goal
    - How you're doing it?
  - Examples
    - How to implement a new HR policy?
    - How decision should be made in a meeting?
    - How quickly a project should be completed?
    - Who should be consulted and included in the project?
  - Negatively affects performance (Jehn and Mannix, 2001)

Bendersky, C., & Hays, N. A. (2012). Status conflict in groups. *Organization Science*, *23*(2), 323-340.

1

TEAM DECISION MAKING

1

Maximizing team/group productivity: Synergy

2

Group synergy is when the team does better than any of the individuals on the team. This is the ideal all groups hope to achieve.

Teams / leaders need to work towards the two –

- Improve group synergy
- Reduce process losses

2

Process Losses

- As leaders / team members, there are some signals about process losses which one could be more mindful of…..

3

Process Loses – Conformity

- Groupthink - Overlooking potential problems in the pursuit of consensus thinking
- Abilene Paradox
  - Making ineffective decisions that are contrary to what each of the group members individually believe, because they don't want to 'rock the boat'
  - Not voicing concerns despite knowing that a decision taken by the team is wrong or risky

4

Process Loses - Participation

5

- Who is contributing? Why (function of age, experience, competence and personal style)?
- Consequences of Uneven Participation?
  - **Social Loafing:** The tendency for people to apply less effort when they're part of a group. Some loafers perceive that others in the group are slacking, so they feel justified in exerting less effort
  - **Bystander Effect-** Diffusion of responsibility

5

Process Loses – decision making biases

6

- Common knowledge effect: Spending more time on information that most members already know, instead of considering unique knowledge
- *Effective strategies – set up the right process, structure, norms, and goals:*
  - Determine team members' knowledge and expertise:
    - *What do <u>you</u> know about this that I don't*?
  - Suspend initial judgment; wait for evidence
  - Don't rely solely on the majority rule principle
  - Redirect discussion to unshared information
    - *I heard you say something earlier that I did not know; that we did not discuss yet fully*
  - Include someone who explicitly signals differences

6

Decision rules

- Majority rule
- Minority rule
- Voting
- Consensus
- Qualified consensus

7

Process Loses - Conflict

- Multiple types of conflict
- Which members of the group are listened to?
- Which members of the group are ignored?
- Is there any rivalry in the group? Some always support and some always contradict?
- Are there some people in the group who always disagree
- Is it creative abrasion or personal abrasion?

8

Decrease Process Losses

9

- Spending time in the early stages discussing Goals, Rules, Responsibilities
- Develop decision rules
- Group monitoring
- Expert identification
- Appropriate use of conflict

9

Solutions to deal with process losses in groups

10

- Contracts
- Build trust
  - Shared activities
  - Self-disclosure

10

Synergy: Where does this come from?

11

- Information integration from diverse views
- Buy-in, more motivational pull
- De-biasing

11

Future of teams: Shifting boundaries

12

- Fluid
  - Members change over time in response to work demands
- Overlap
  - Members concurrently working on multiple teams
- Dispersion
  - Extent geographically or organizationally dispersed

Mortensen, M., & Haas, M. R. (2018). Perspective—Rethinking teams: From bounded membership to dynamic participation. *Organization Science*, *29*(2), 341-355.

12

DIVERSITY

1

1

What is Diversity?

- Merriam Webster
  - "the condition of having or being composed of differing elements : variety"
- Extent to which members of a group are similar to, or different from, one another (Robbins et al., 2017)

2

2

Why is diversity important to companies?

- Moral reasons
  - Why does diversity matter as a matter of principle?
- Business / economic reasons
  - How can diversity contribute to organisational goals?

3

Why is diversity important to companies?

- Moral reasons
  - Fairness
  - Businesses meet their responsibilities
  - Overcoming historical inequalities
- Business / economic reasons
  - Innovation / creativity
  - Decision making benefits
  - Enhanced access to talent
  - Market understanding increases
  - Reputational benefits

4

Inclusion

5

Is…

- ✓ Sharing of ideas from all perspectives
- ✓ Valuing individuals and leveraging their diverse talent, not *in spite* of their differences, but *because* of them
- ✓ People working together despite differences
- ✓ Fostering a culture where differences of thought and opinions are embraced with enthusiasm and celebrated

Is not…

- × Creating the delusion that everyone will always get along.
- × Pretending to agree for the sake of avoiding conflict.
- × Ignoring the differences that may exist.

5

Diversity vs Inclusion

6

Diversity	Inclusion
Achieved by hiring different people	Achieved through change in mind-sets
An Outcome	A Process
A technical and complicated problem	An adaptive and complex problem

6

SURFACE-LEVEL AND DEEP-LEVEL DIVERSITY

Understanding Types of Diversity and Their Organizational Impact

7

Surface vs Deep-Level Diversity

Surface-Level Diversity
- Observable
- Immediate impact
- Demographic attributes
- Influences first impressions

Deep-Level Diversity
- Invisible initially
- Emerges over time
- Cognitive & value differences
- Influences team processes & performance

- Surface level: Defined as observable demographic and physical attributes (e.g. Age, Gender, Ethnicity).
- Deep level: Defined as differences in values, beliefs, attitudes, and personality
- Both impact team processes, perceptions of fairness, and inclusion.

Harrison, D. A., Price, K. H., & Bell, M. P. (1998). Beyond relational demography: Time and the effects of surface-and deep-level diversity on work group cohesion. *Academy of Management Journal*, *41*(1), 96-107.; Bell, S. T., Villado, A. J., Lukasik, M. A., Belau, L., & Briggs, A. L. (2011). Getting specific about demographic diversity variable and team performance relationships: A meta-analysis. *Journal of Management*, *37*(3), 709-743.Van Knippenberg, D., & Schippers, M. C. (2007). Work group diversity. *Annu. Rev. Psychol.*, *58*(1), 515-541.

8

Organizational Implications

- Surface-level diversity is key for representation and compliance.
- Deep-level diversity drives innovation, problem-solving, and adaptability.
- Inclusion policies must address both:
  - Surface: Equal opportunity and bias mitigation.
  - Deep: Valuing cognitive and value-based diversity.

9

TEAMS IN CRISIS!

1

A Business Crisis Entails Some Key Elements…..

- Ambiguity (of cause, effect, or means of resolution)
- High stakes
- Perceived urgency
- Rarity
- Significance of the event (for firms' health/viability)
- Level of impact on stakeholders

Pearson, C. M., & Clair, J. A. (1998). Reframing crisis management. Academy of Management Review, 23(1), 59-76.

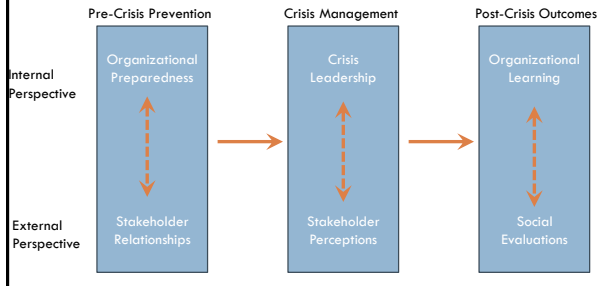

James, E. H., Wooten, L. P., & Dushek, K. (2011). Crisis management: Informing a new leadership research agenda. *Academy of Management Annals*, *5*(1), 455-493.

2

Managing Crisis

3

Internal and External Perspective of the Crisis Process

Bundy, J., Pfarrer, M. D., Short, C. E., & Coombs, W. T. (2017). Crises and crisis management: Integration, interpretation, and research development. *Journal of management*, *43*(6), 1661-1692

4

Pre-crisis prevention

- Improve organizational preparedness
  - Teams and organizations orient themselves — via changes in culture, design, and structure — to prevent system breakdowns that may lead to crises
- Fostering positive stakeholder relationships

Bundy, J., Pfarrer, M. D., Short, C. E., & Coombs, W. T. (2017). Crises and crisis management: Integration, interpretation, and research development. *Journal of management*, *43*(6), 1661-1692

5

During the crisis

- Role of leaders critical
- Developing an understanding of how stakeholders perceived and react to the crisis, and how organizations can manage these perceptions

Bundy, J., Pfarrer, M. D., Short, C. E., & Coombs, W. T. (2017). Crises and crisis management: Integration, interpretation, and research development. *Journal of management*, *43*(6), 1661-1692

6

Managing media in a crisis

Do's	Don't
Prepare for interviews	Repeat loaded words like "crisis" or "devastating"
Develop key messages and facts about the incident and steps taken so far	Speculate about circumstances or facts. Tell a reporter what you know and commit to disclosing more as you learn the facts
Anticipate questions journalists will ask. Have answers and keep them short	Make "off the record" statements. Anything you say can be used by the media
Respect deadlines	Use jargon
Provide written information	Lose your temper
Be positive but show empathy for those affected by the crisis	Say "no comment" to something you are not sure about. Tell what you know
Make yourself accessible	Try to stop a journalist from writing a story

Weiner, D. (2006). Crisis communications: Managing corporate reputation in the court of public opinion. *Ivey business journal*, *70*(4), 1-6.

7

The Psychology Behind Effective Crisis Leadership:

- In a crisis, people don't need a vision to inspire them–they're already raring to act.
- Instead, they need what psychologists call "holding"– leaders who acknowledge their emotions, can contain their distress, and give people a sense of context and reality.
- Holding allows people to channel their desire to act into something purposeful, and it allows them to more fully be themselves.
- People never forget how managers treated them when they were facing loss.

8

Post-crisis

- Organization/team learning as a key outcome
  - Learning from a crisis is possible
  - Understand the degree to which lessons are internalized
- Organization/team's response strategy and its match with stakeholder attribution of responsibility for the crisis

Bundy, J., Pfarrer, M. D., Short, C. E., & Coombs, W. T. (2017). Crises and crisis management: Integration, interpretation, and research development. *Journal of management*, *43*(6), 1661-1692
